

Oleksii Tsesliuk

Lead Product Designer • Design Program Lead

tsesliuk@gmail.com • linkedin.com/in/tsesliuk

OWN STATEMENT

15+ years of work experience in interaction and visual design — past 7-8 years leading design programs and design systems for B2B enterprise products.

I run discovery, define design strategy, and lead design teams through full lifecycles: research, prototyping, hand-off, release, and follow-up iterations.

Comfortable across surveillance and big-data UIs, regulated domains (medical, oil & gas), supply-chain planning, media intelligence, and multi-platform consistency (desktop • web • mobile • hardware).

Most recent work is under NDA — case-study deep-dives are available on request and via password-protected pages.

KNOWLEDGES

HE75:2009/(R)2013 Human factors engineering • IEC 60601-1-8 Edition 2.1 2012-11 • WCAG 2.1 Level AA • Material Design • ISO 9241 (heuristic analysis)

SELECTED COMPANIES

AgileEngine • Luxoft • EPAM • GlobalLogic • Developex

Halliburton • TVEyes • ToolsGroup • Edsembli • WaterFlex • SpaceLabs • Mobile Health AG • Volvo • BMC • JLL • MetricInsights • Cambium Networks • Corsair

AGILEENGINE INTERNAL DESIGN SYSTEM

B2B (Internal), Multi-team, Design System Ownership, UX Management · 2021-Active

PRODUCTS

Multi-team Figma library, branded sub-systems for ~25+ teams, Adoption channels (Digests & Emails)

INITIAL BUSINESS PROBLEM

- Many AE teams produce inconsistent UI across client work
- No shared component library → repeat work, drift in quality
- No adoption mechanics: new components don't reach designers in flight

DEFINED USER PROBLEMS

- Designers solve solved problems instead of new ones
- New hires spend weeks before producing brand-consistent work
- Engineering integrations fragmented per team

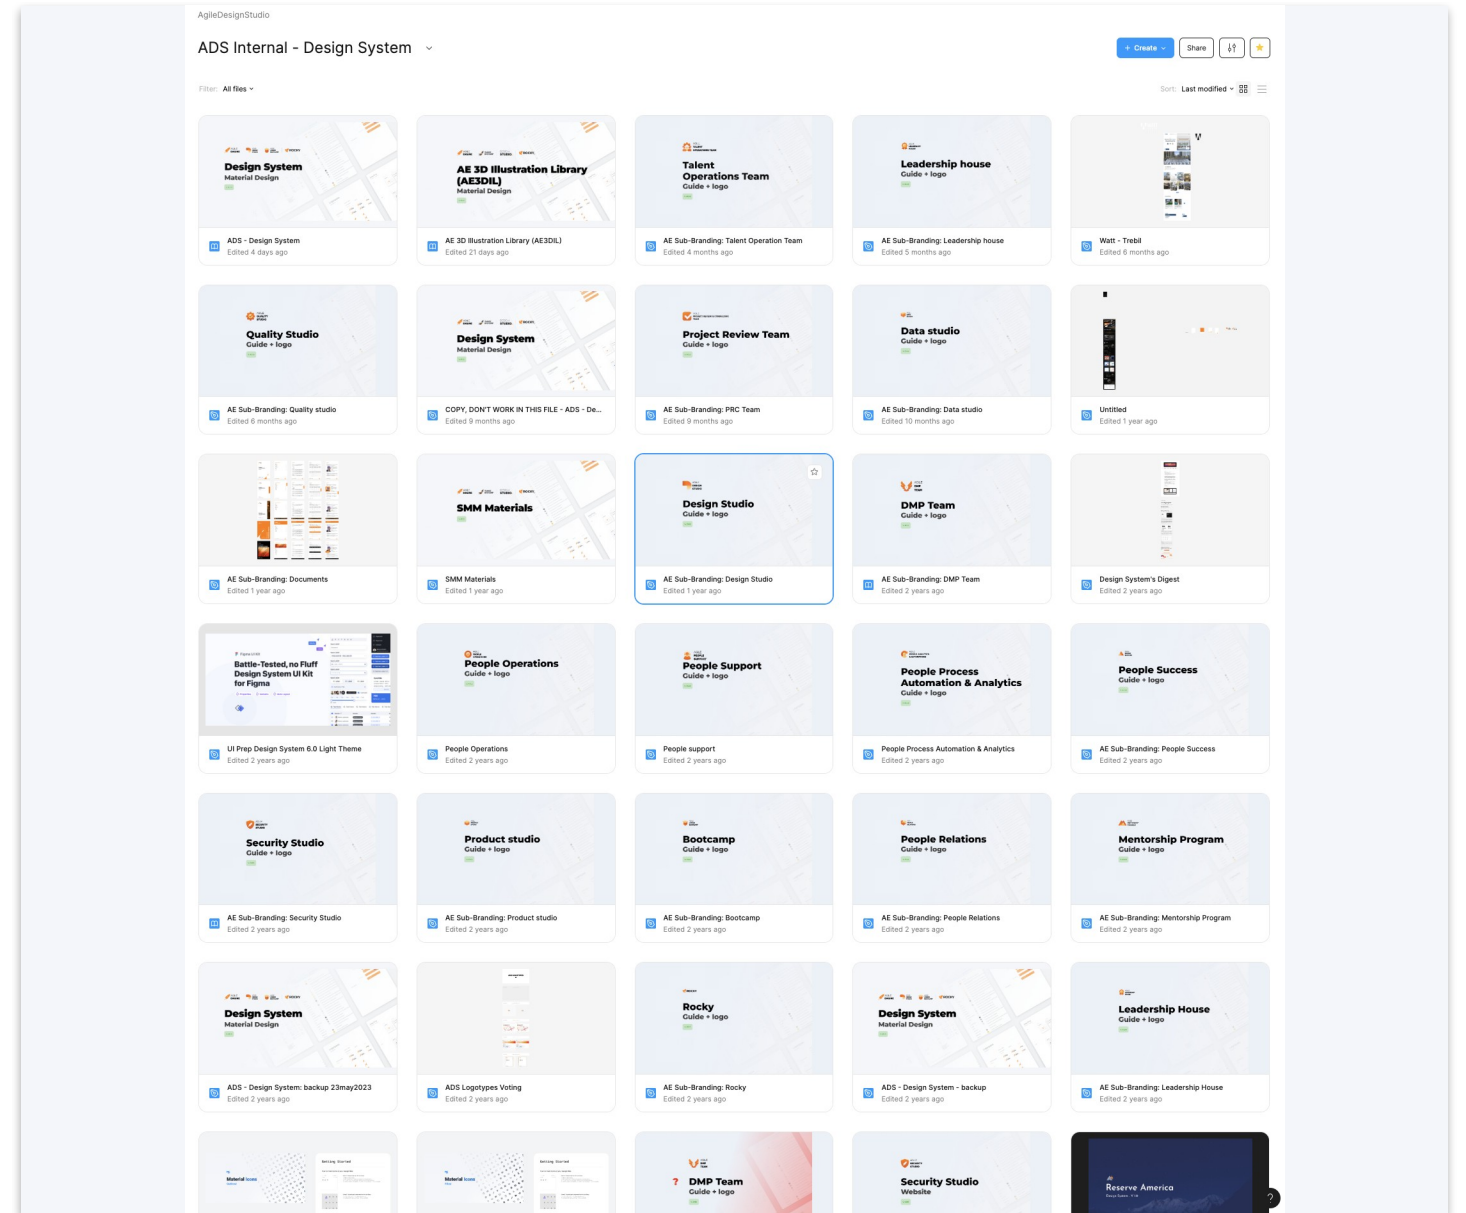

SOLUTION

Built AE's internal design system end-to-end: foundations, components, patterns, and per-vertical sub-systems (Quality, Talent, Leadership, Project Review, Data, Product, Bootcamp, Mentorship, etc.). Operate the system as a product — Library + Backups + Recent Versions cadence + Digests/Emails to drive adoption.

TOOLS & METHODOLOGIES

Figma libraries, branching, version control. Multi-team governance. Atomic Design. Material UI as base where applicable. Async digests as adoption channel.

AgileEngine Internal Design System — sub-systems library overview (2025)

UNIFIED EXPERIENCE FOR SUPPLY CHAIN PLANNING

B2B, Big Data, Discovery, Design Strategy, UX/UI, UX Management · 2021-2023 · ToolsGroup

PRODUCTS

Desktop Web Application, Design System (Foundations · Components · Patterns)

INITIAL BUSINESS PROBLEM

- Many products with inconsistent UX and UI
- Dated look and feel; drift across product family

DEFINED USER PROBLEMS

- Users have to log into a few different tools to complete daily tasks
- Help and support not available to the end-user
- Users don't learn about new functionality after software updates

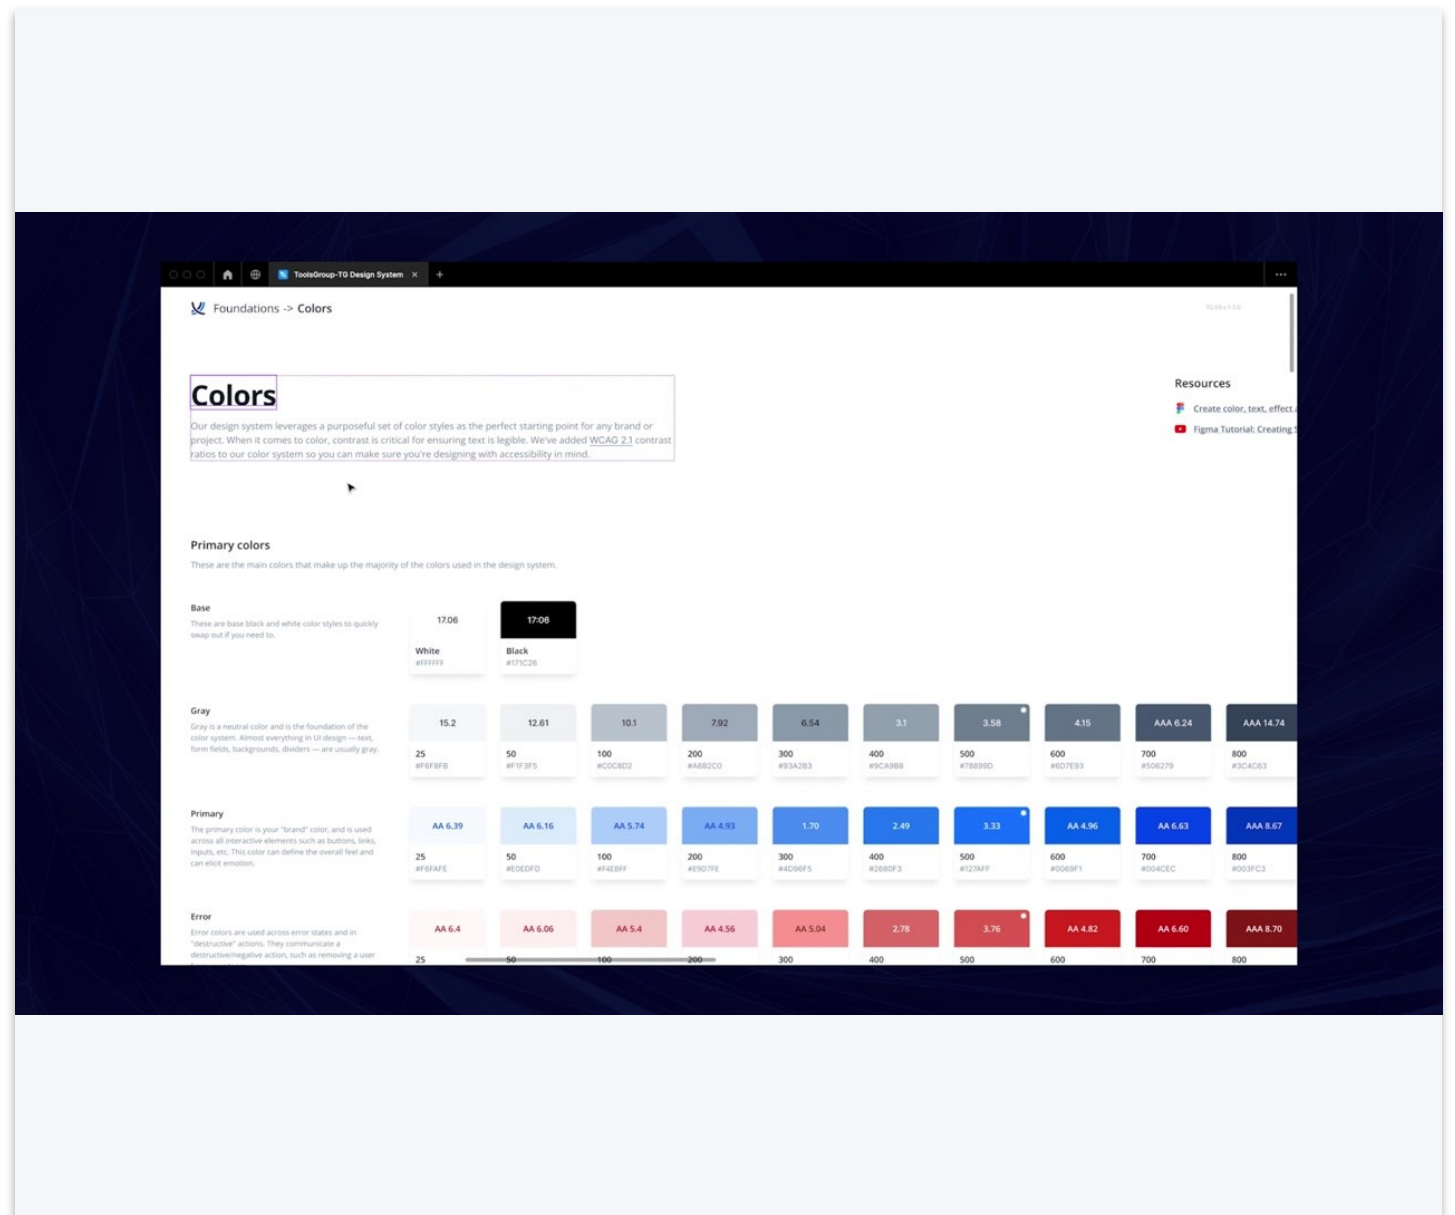

SOLUTION

Discovery research and full Design program. Created design strategy and led the design team through Discovery → Design → Hand-Off. Delivered a unified experience layer as a single entry point, plus an embedded Academy with in-product tutorials. Built a design system to prevent re-emergence of inconsistency.

TOOLS & METHODOLOGIES

Stakeholder interviews, user interviews, usability testing, CJM, MindMaps, Lean UX, Agile, Miro, Figma branches, Adobe Premiere Pro, Google Sheets, Jira, Google Meet.

MEDIA BIG DATA TOOL (TV, RADIO & PODCAST)

B2B/B2C, Big Data, Discovery, Design Strategy, UX Design + AI features ·
2022-Active · TVEyes

PRODUCTS

Desktop Web Application, Mobile Companion, Email templates, Design System (MUI), AI Features

INITIAL BUSINESS PROBLEM

- Dated UI and UX after 25 years of organic growth
- Hard to sell; previous redesign attempts failed

DEFINED USER PROBLEMS

- No mobile support for analysts in the field
- Too many features, complicated search (most important)
- Dated UX patterns slow down core workflows

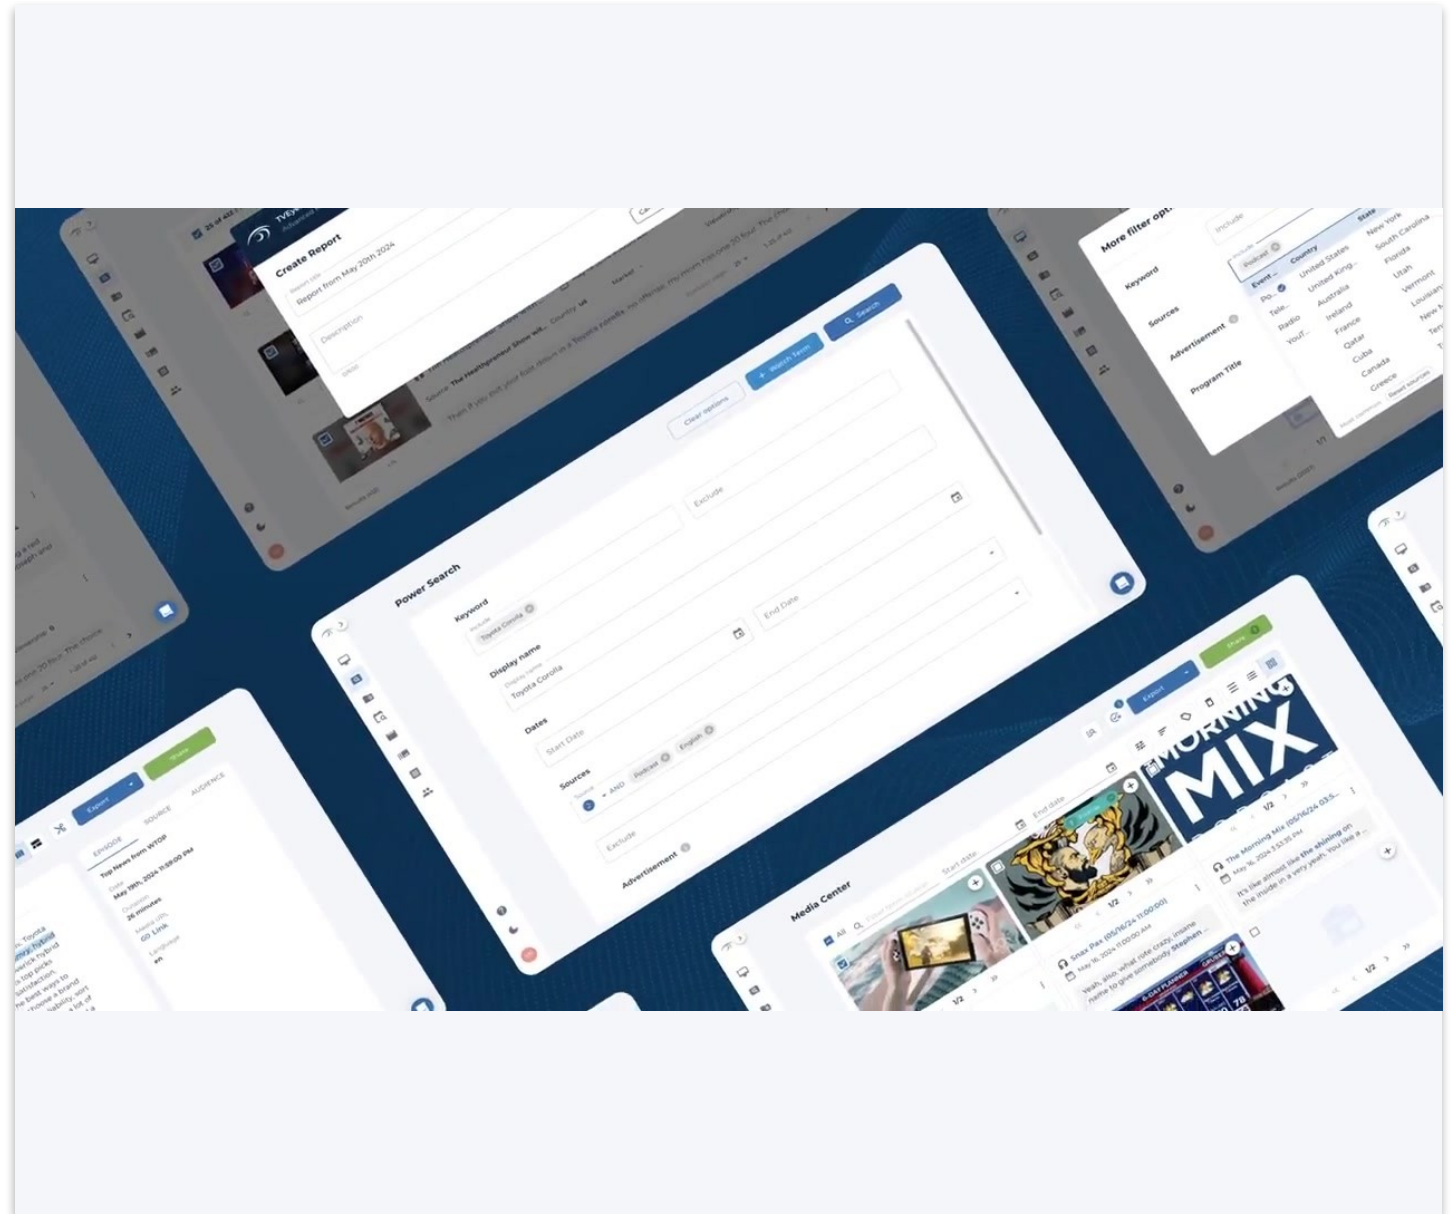

SOLUTION

Full 7-phase design program: Pre-Discovery → Discovery → Prototyping → Hi-Fi & Hand-Off → Hand-Off Project → Twosion AI features → Release & Documentation. Created Material UI-based Design System, mobile companion, and AI feature suite (sentiment analysis, smart alerts, AI entities, accessibility mode validated by heatmap analysis).

TOOLS & METHODOLOGIES

User interviews, usability testing in Maze, CJM, Lean UX, Miro, Figma libraries with branching, Adobe Premiere for demos. Heatmap analysis. WCAG 2 AA. React + MUI hand-off.

GAS & OIL REDESIGN PROGRAM

UX Research, Product Redesign, Multi-Platform · 2018-2022 · Halliburton via Luxoft

PRODUCTS

Web Application for Real-Time Monitoring (Desktop), InSite Mobile, Design System

INITIAL BUSINESS PROBLEM

- Web product became business-critical during Covid-19, but UI/UX did not support remote surveillance
- Company didn't know what to improve to retain and win consumers

DEFINED USER PROBLEMS

- Screen distracting attention — too many controls
- Users unaware of new features and updates after release
- Support team has to explain how to manage data via phone

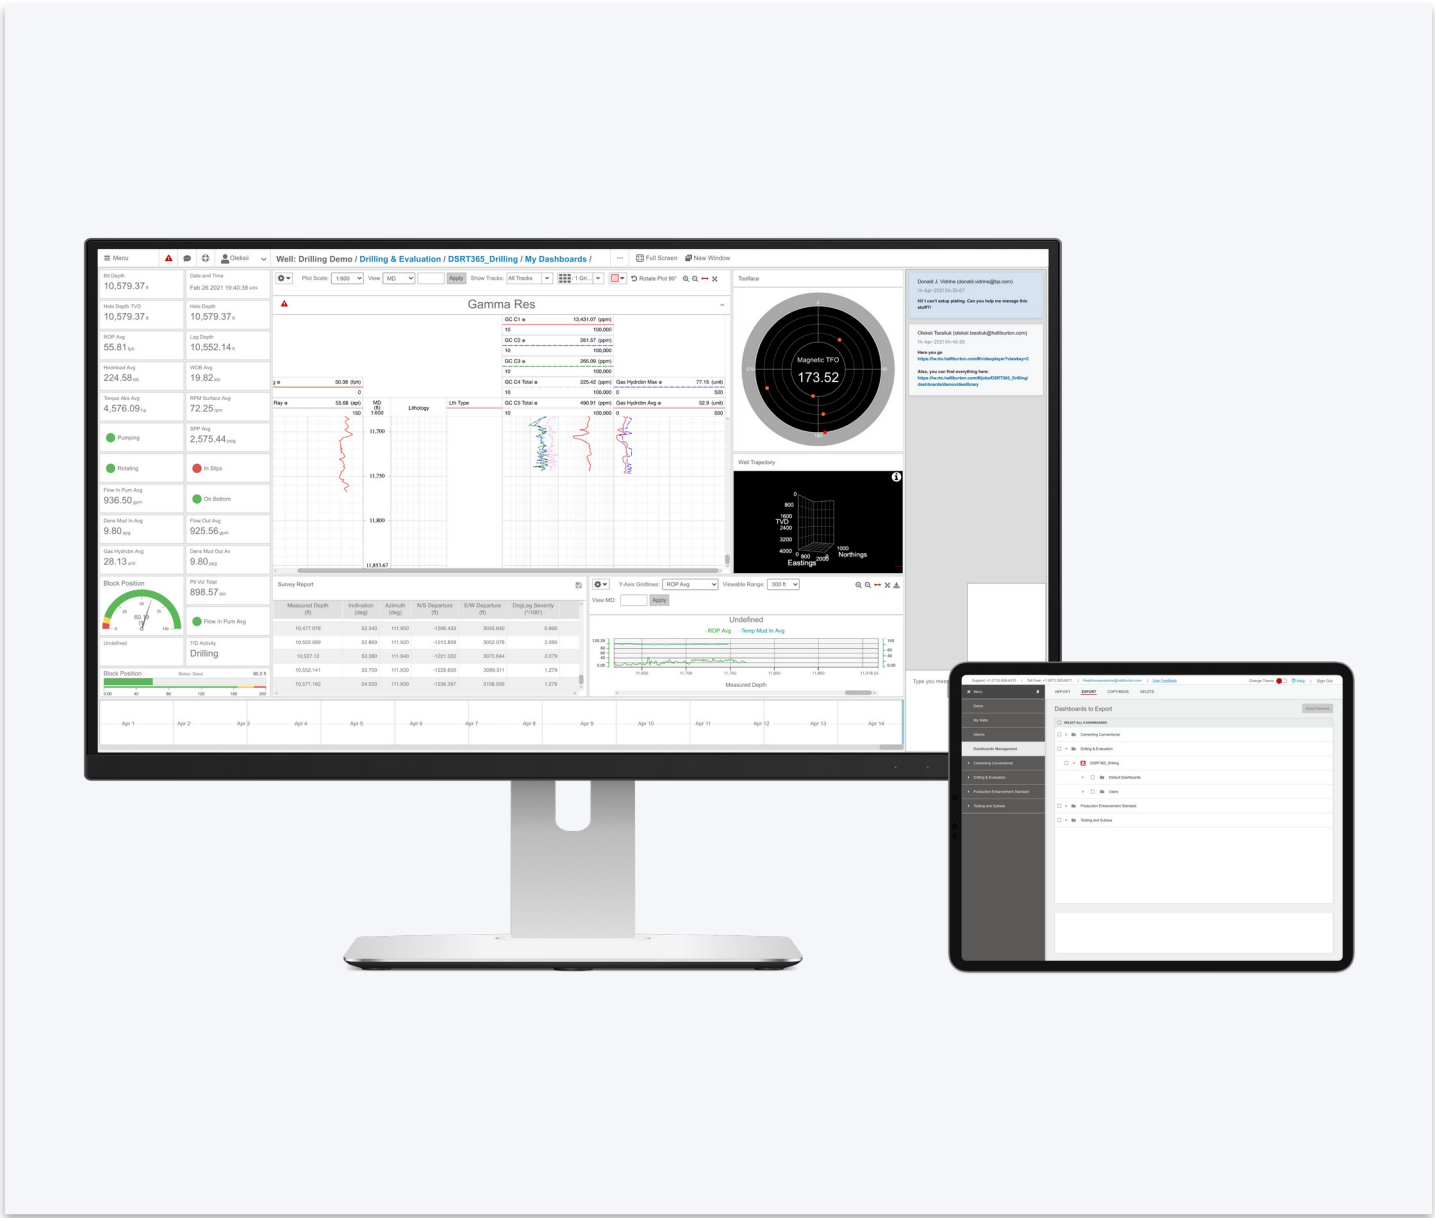

SOLUTION

Proposed Full Screen mode without controls. Integrated chat into the Home screen for in-product communication. Created a tutorials page with shareable feature walkthroughs. Built Brand Style + Design System covering Drilling/Well/Production/Information Management/Investment domains.

TOOLS & METHODOLOGIES

Stakeholder + user interviews, UX audit (PDF), IA, Adobe XD. Internal demo videos for release. Cross-team design system ownership across desktop and mobile (InSite).

HEALTHCARE TELEMETRY & DIAGNOSTICS INTERFACES

B2B, Big Data, Discovery, Design Strategy, UI/UX, UX Management · 2014-2021 · SpaceLabs via GlobalLogic

PRODUCTS

Clinical Web Portal, Surveillance Desktop App, Mobile, Design System (Rainier)

INITIAL BUSINESS PROBLEM

- User onboarding too long and expensive for hospitals
- Risk of inconsistent GUI across multi-located vendors (India, Ukraine, US)

DEFINED USER PROBLEMS

- Users mentally younger than the current UI — system feels different from other hospital interfaces
- Some elements not visible from 3 m away when entering a patient room

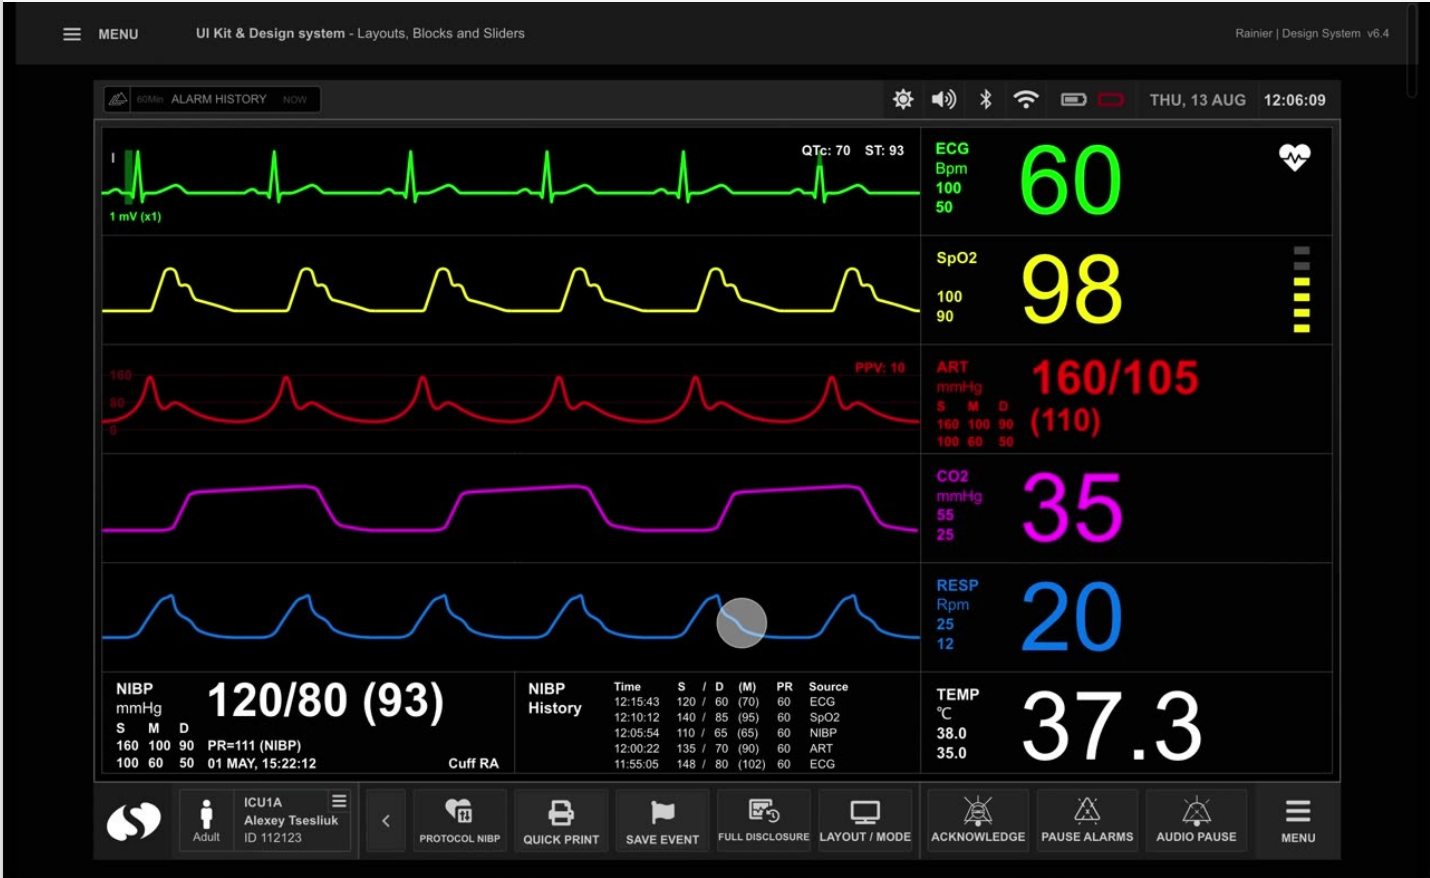

SOLUTION

Discovery research + Redesign program. Followed HE75:2009 Human Factors and IEC 60601-1-8 alarm standards. Built Rainier Design System (UI Kit, Layouts, Blocks, Sliders) supporting surveillance monitors, the clinical portal, and mobile. Used recent UX patterns that meet medical device standards.

TOOLS & METHODOLOGIES

User interviews, usability testing, CJM, MindMap, Lean UX, Adobe XD, Adobe Premiere Pro for demos. Adobe Creative Cloud version control. Slack + Microsoft Teams for distributed teams.

MOBILE HEALTH FOR CANCER TREATMENT

B2C / B2B2C, Mobile, Audit + Roadmap, Discovery · 2020-2021 · Mobile Health AG via GlobalLogic

PRODUCTS

Consilium Care iOS/Android app, Backend tools, Audit deliverables

INITIAL BUSINESS PROBLEM

- Existing patient-facing app needed audit + scoped Q3.1 release before clinical trial deadline
- Multi-vendor delivery: align design audit with engineering commitments

DEFINED USER PROBLEMS

- Patients undergoing cancer treatment need clear, motivating, low-friction interactions
- Care teams need timely insights from patient-reported outcomes

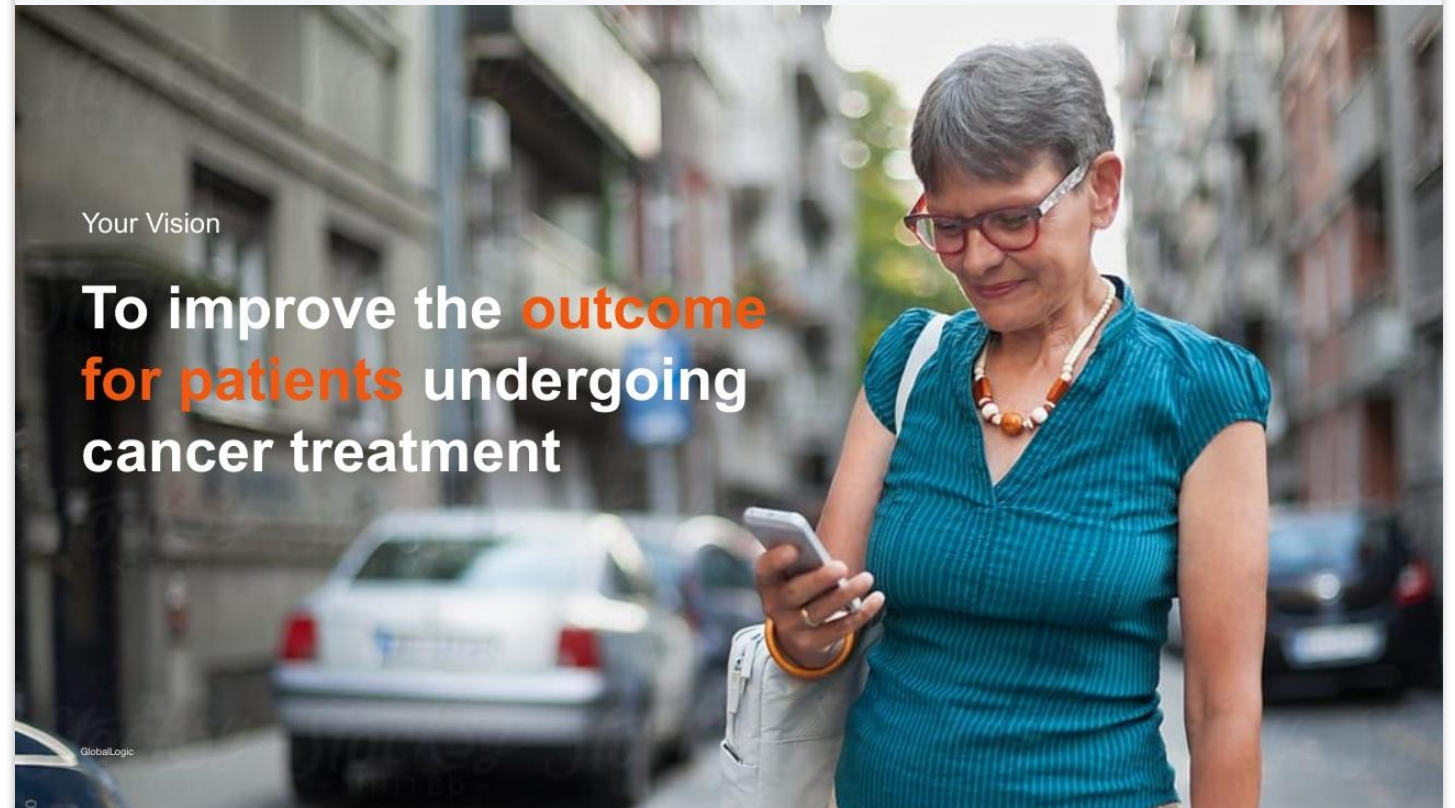

SOLUTION

Led the design audit (delivered as a structured Excel) and the V3.1 scope plan against an end-of-September clinical-trial deadline. Aligned design changes with engineering capacity across knowledge transfer → core build → UAT → support & training timeline.

TOOLS & METHODOLOGIES

Design audit method (Excel-driven), Figma, GlobalLogic + TWC + MHAG vendor coordination. Clinical-trial milestone planning (SAKK Quality of Life Trial).

"Improve the outcome for patients undergoing cancer treatment" — Mobile Health AG vision

BUSINESS INTELLIGENCE STARTUP

Product Design, Development, Management · 2013-2017 · MetricInsights via Developex

PRODUCTS

Web, Mobile and SmartWatch (Apple Watch) — UI Kit and Standards

INITIAL BUSINESS PROBLEM

- User experience is poor — Adobe, Facebook, Blizzard ready to cancel subscriptions

DEFINED USER PROBLEMS

- Inconsistent UI and UX across modules
- Users can't see important notifications without entering the system
- System status not obvious — complicated and unclear feedback

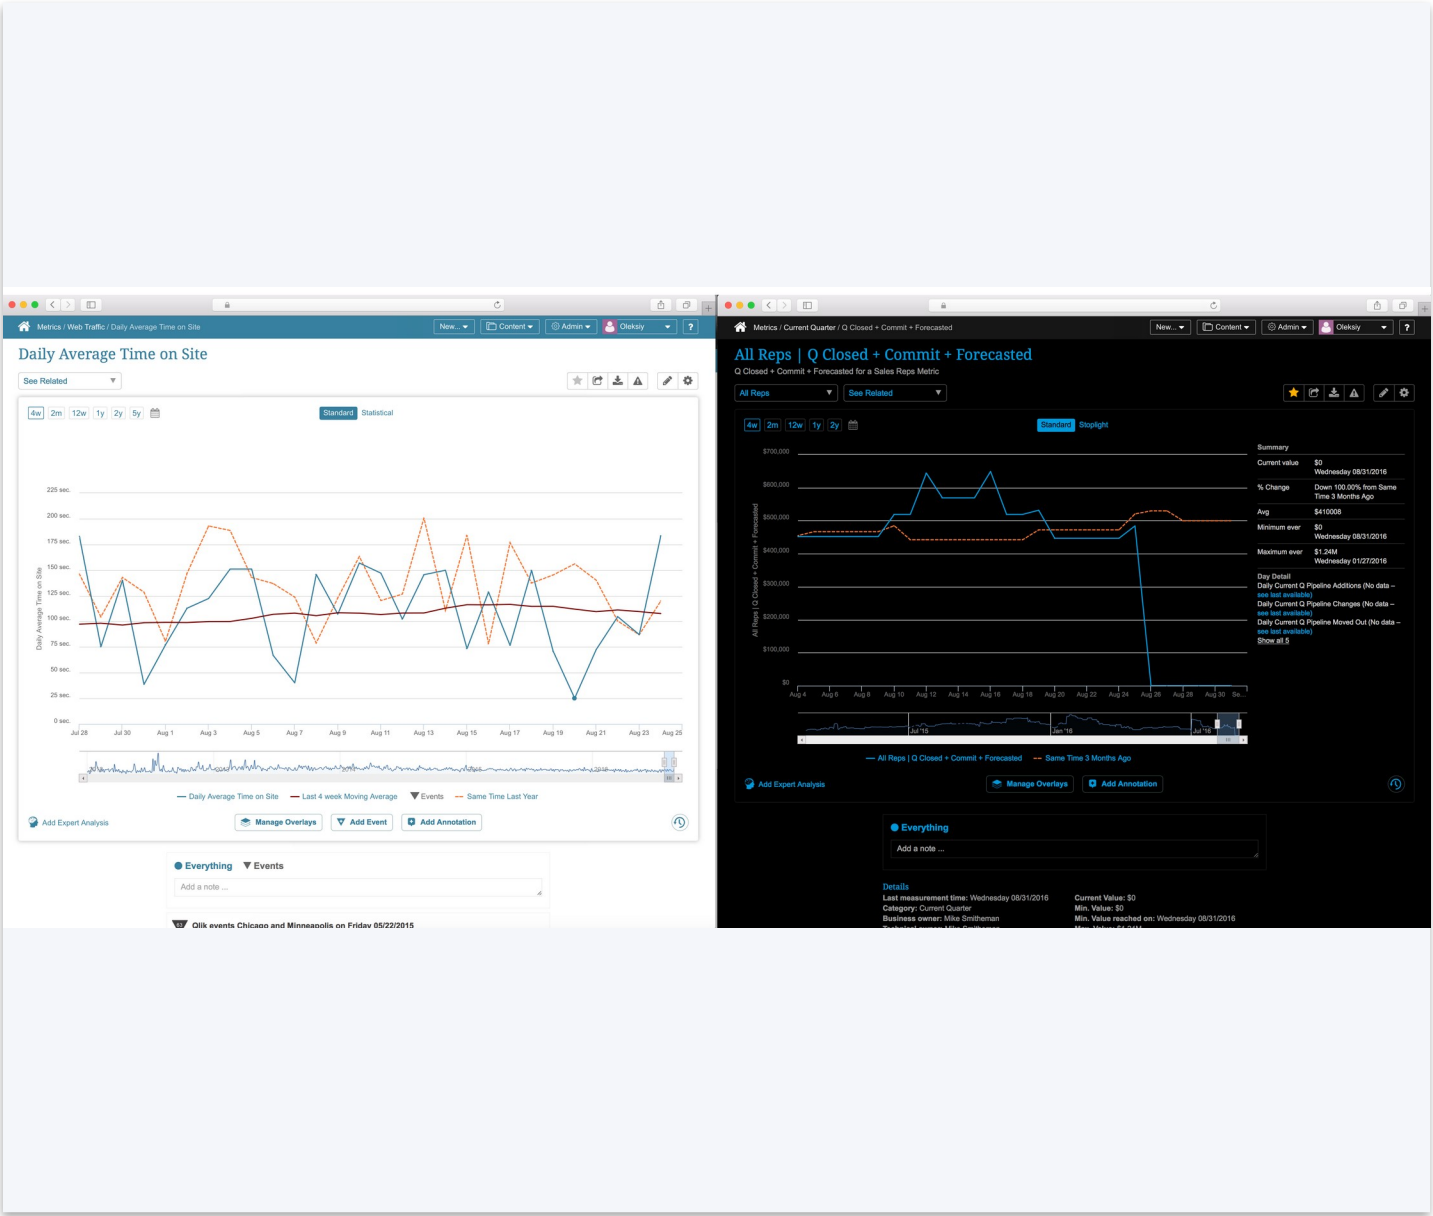

SOLUTION

Built a UI Kit aligned with common heuristics and W3C standards. Designed SmartWatch and mobile companion apps to surface important alerts outside the main system. Established themable UI (light/dark) with shared tokens and data-grid patterns.

TOOLS & METHODOLOGIES

Sketch, Photoshop, hand-off via PNG/spec files (era-appropriate). Cross-platform design coordination.

More in Case Studies →

MetricInsights — light/dark themable big-data dashboards (subscription retention case)

DESIGN FOR WIRELESS BUSINESS

Research, Design, Presale · 2017-2019 · Cambium Networks via GlobalLogic

PRODUCTS

Software for Hardware (network management), UI Kit, Products Catalog

INITIAL BUSINESS PROBLEM

- Software is complicated and inconsistent → expensive support, lost contracts
- Company doesn't know how to present new interfaces

DEFINED USER PROBLEMS

- User confused when interacting with some components
- User confused without clear system status
- Design too dark — hard to use outdoors during installations

SOLUTION

After system evaluation and expert interviews, proposed a design system with a light theme for outdoor use. Designed reduced-interaction controls and improved system feedback. Built a Products Catalog where each item is presented alongside its UI.

TOOLS & METHODOLOGIES

Sketch (interface), Adobe Illustrator + Photoshop (catalog/presale), expert interviews, system evaluation against UX heuristics.

[More in Case Studies →](#)

Cambium networks

The next few slides it is result of short research of the interface and corporate identity

Propositions:

1. Develop standards for ui and corporate identity. (In consistency to websites and other staff).
2. Improve mobile and tablet version and make it more user friendly (Improve notifications, icons, system feedback).
3. Apply standards for all application to make these applications more User friendly for Users who use few applications.

Cambium networks — propositions for UI standards, mobile/tablet, hardware UX consistency

REMOTE USABILITY TESTING FOR MVP

UX Design, MVP Validation, Facilitation · 2018 · JLL via GlobalLogic

PRODUCTS

MVP for a Property Portal (B2B real-estate management)

INITIAL BUSINESS PROBLEM

- MVP shipped, but management who used the old system complains it's 'not working' — without explaining the problem

DEFINED USER PROBLEMS

- Users confused on how to find a property in the new portal

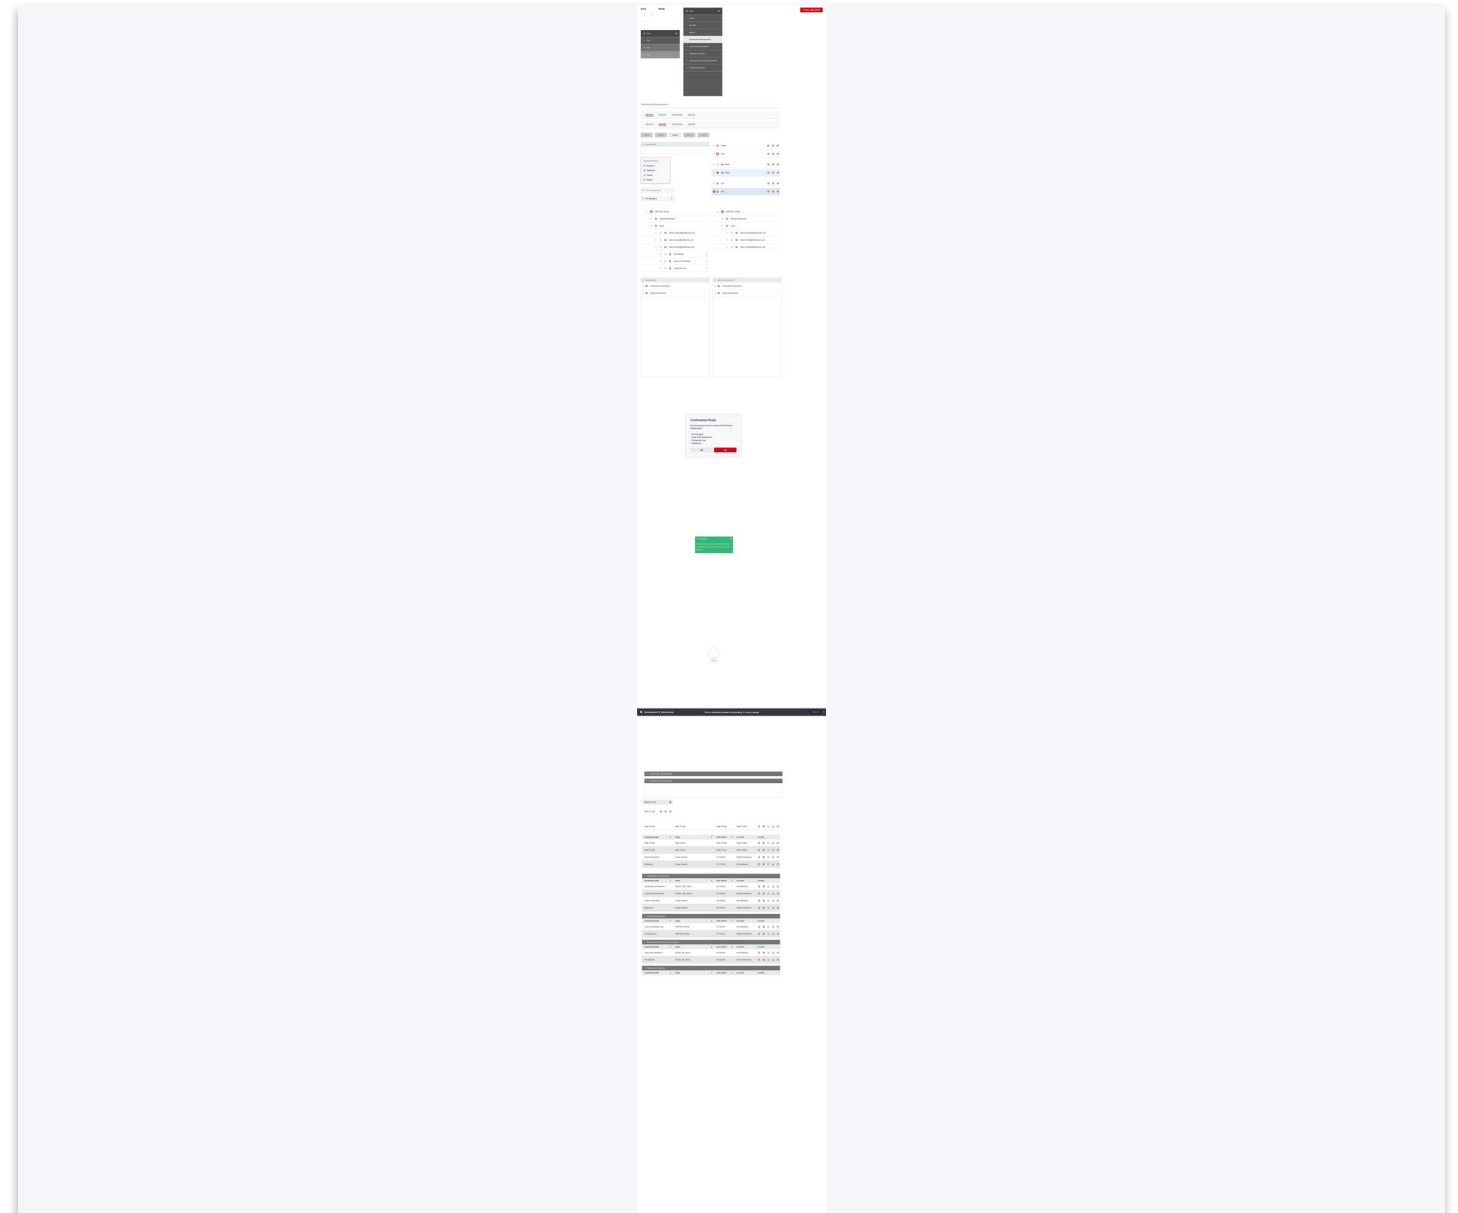

SOLUTION

Ran remote usability testing with end users. Findings: (1) users completed 4 of 5 tasks because of large screens — but management worked from small laptops; (2) users searched for clients in the property list and properties in the client list. Proposed a single unified list with one search and filter, removing 'clients' and 'properties' as separate pages. Dev implemented changes in 1 day.

TOOLS & METHODOLOGIES

Remote usability sessions, SUS questionnaire, Google Forms, Excel scenario calculator, facilitation playbook (recipients · use-cases · agenda · invitation templates).
