TVeyes Global Broadcast Data

Near real-time delivery transcript, metadata, and audio
video from nearly 3,000 channels in 27 countries.

TVEyes AI Release

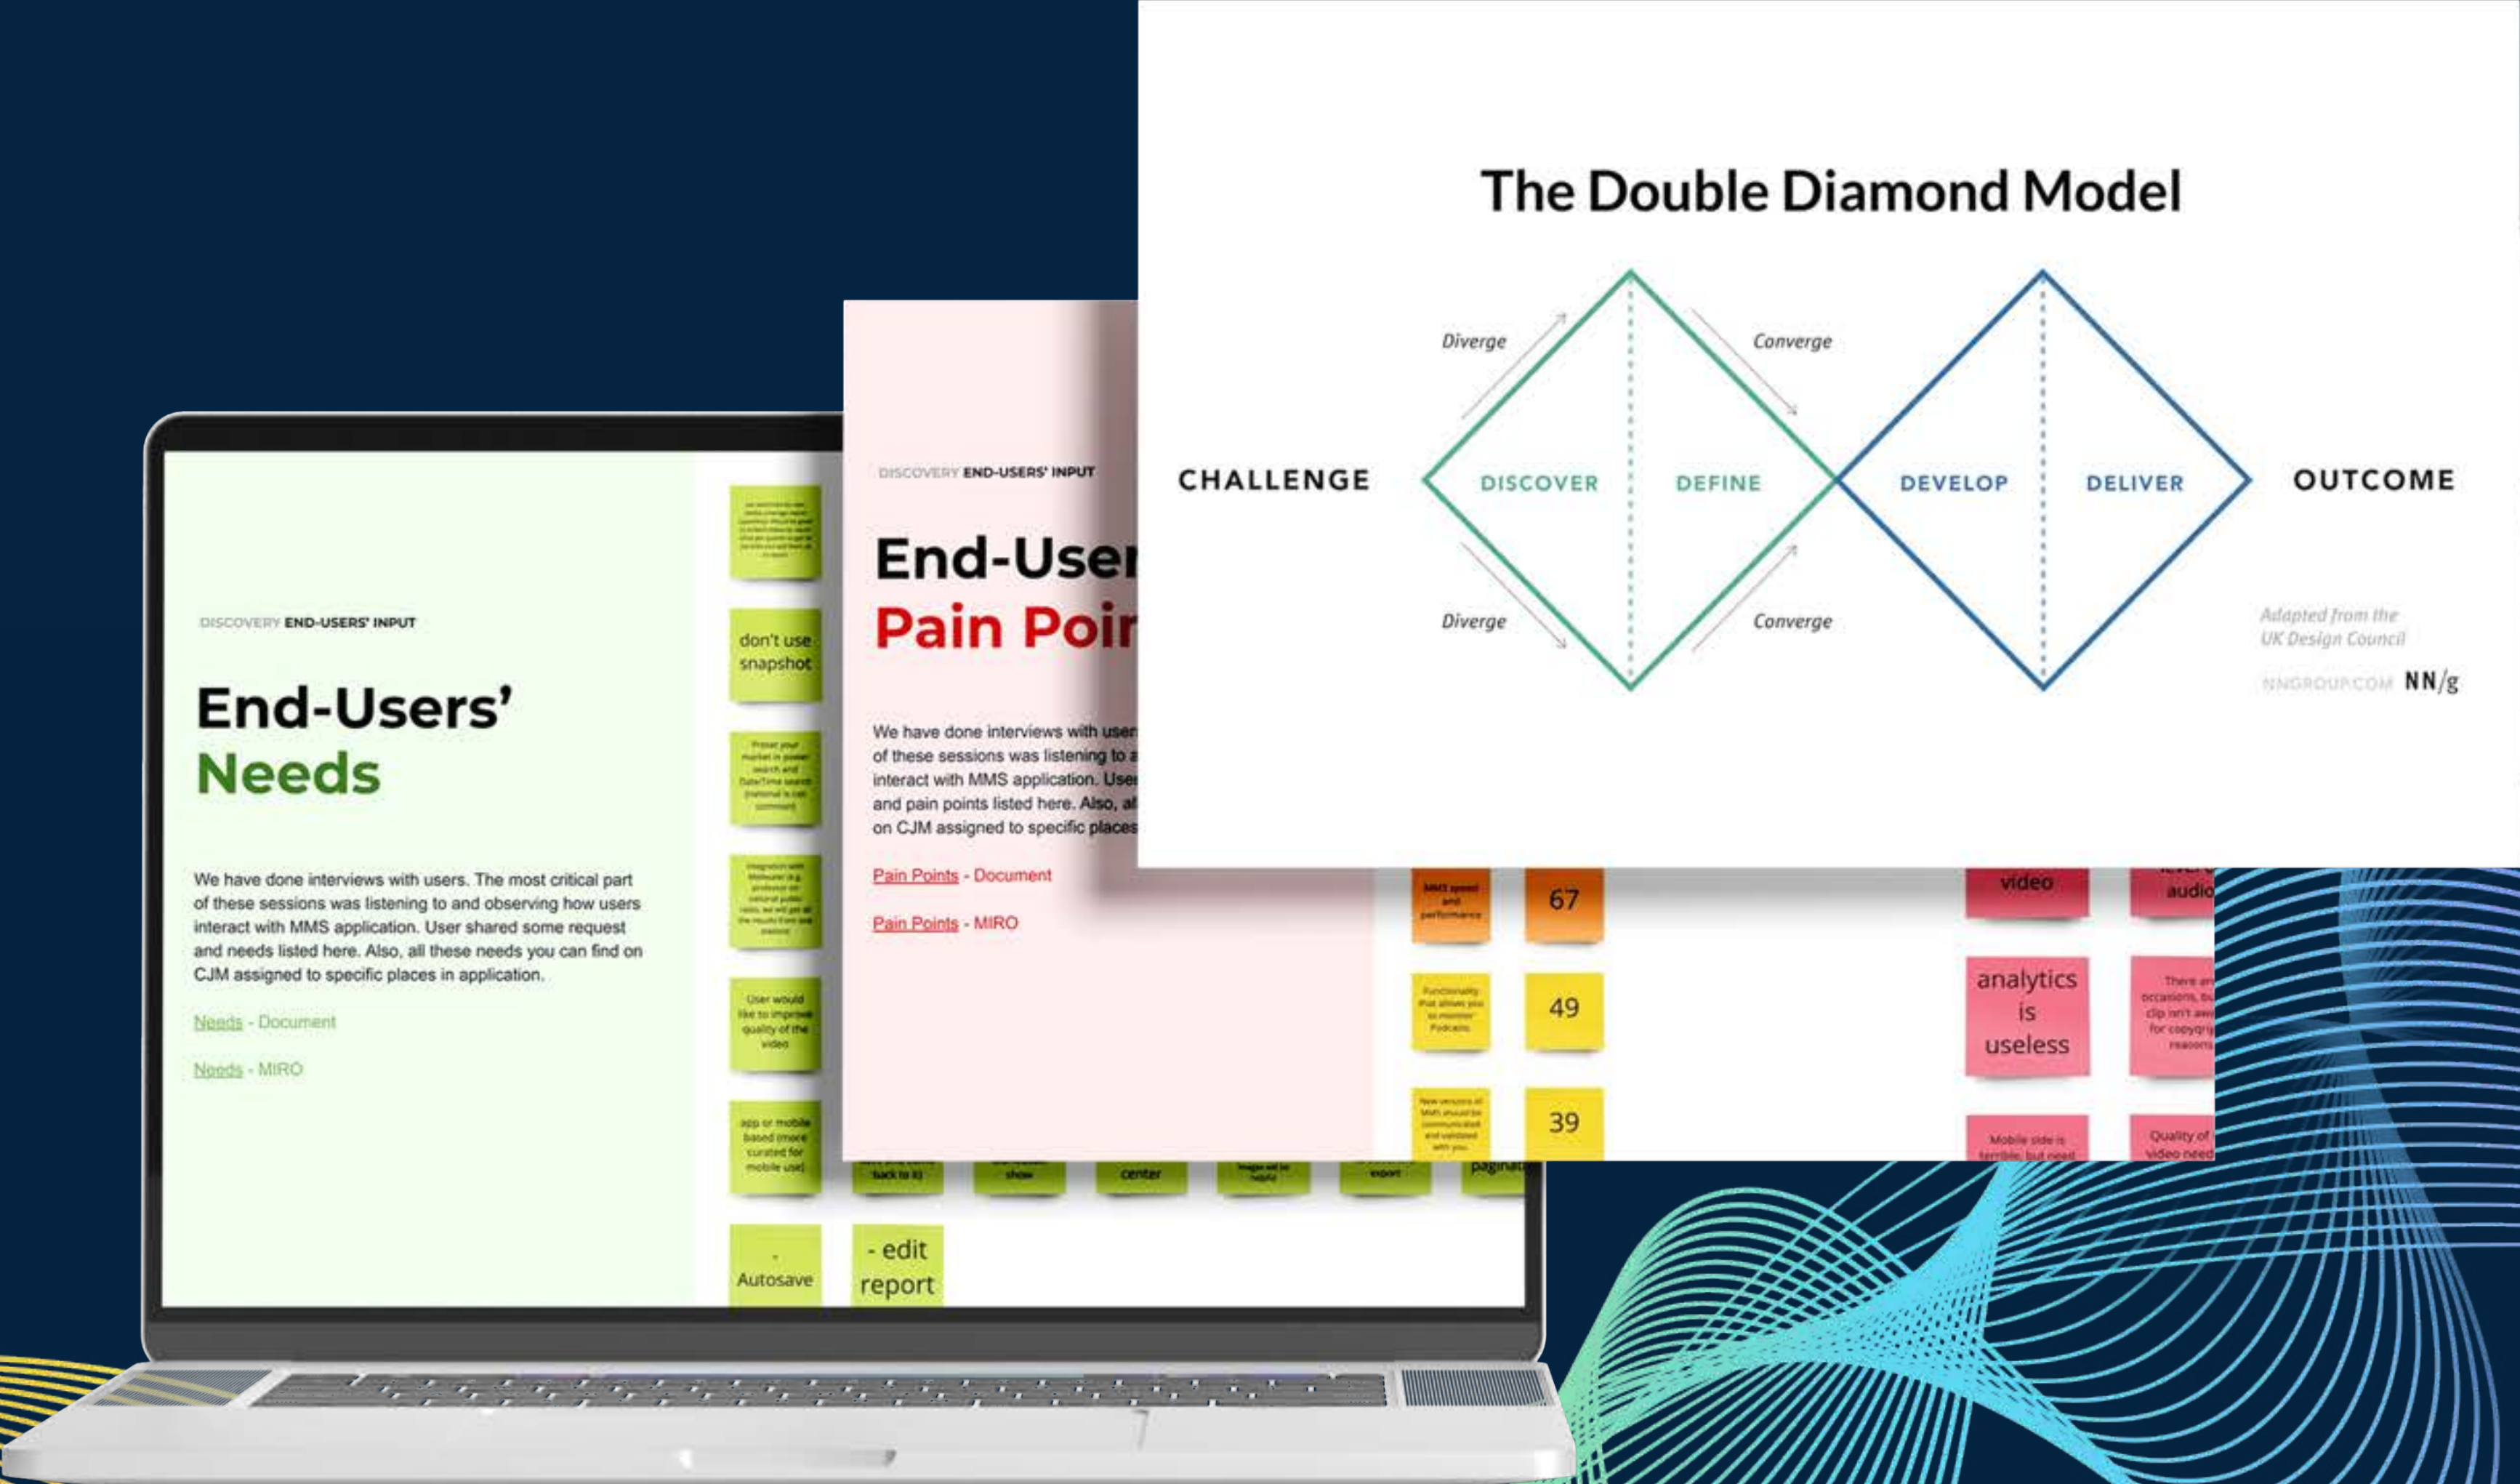

Comprehensive scope of AI features designed to elevate user monitoring experience, providing advanced capabilities and real-time insights.

Discovery Phase

In Agile, a spike is dedicated time during a sprint for user-focused or technical research.

It is about understanding problems and opportunities in small, but feasible, iterative increments.

User Problems

- 🙄 Old design with outdated UX patterns
- 🙄 User can't schedule alerts by sentiment
- 🙄 User don't know what mentions are negative
- 🙄 User can't share events or reports

Solutions

- 😊 Created design system based on Material UI
- 😊 Designed functionality of smart alerts
- 😊 Sentiment analysis has been added
- 😊 Sharing functionality has been created

CJM & Backlog

Our User Flows and Customer Journey Maps stand as the foundational blueprints shaping the user experience at TVEyes.

Design System Extension

A collection of guidelines, principles, and reusable components that based on Material Design.

Every button, icon, and input field is an atomic element. We begin at this elemental level, ensuring clarity, consistency, and purpose.

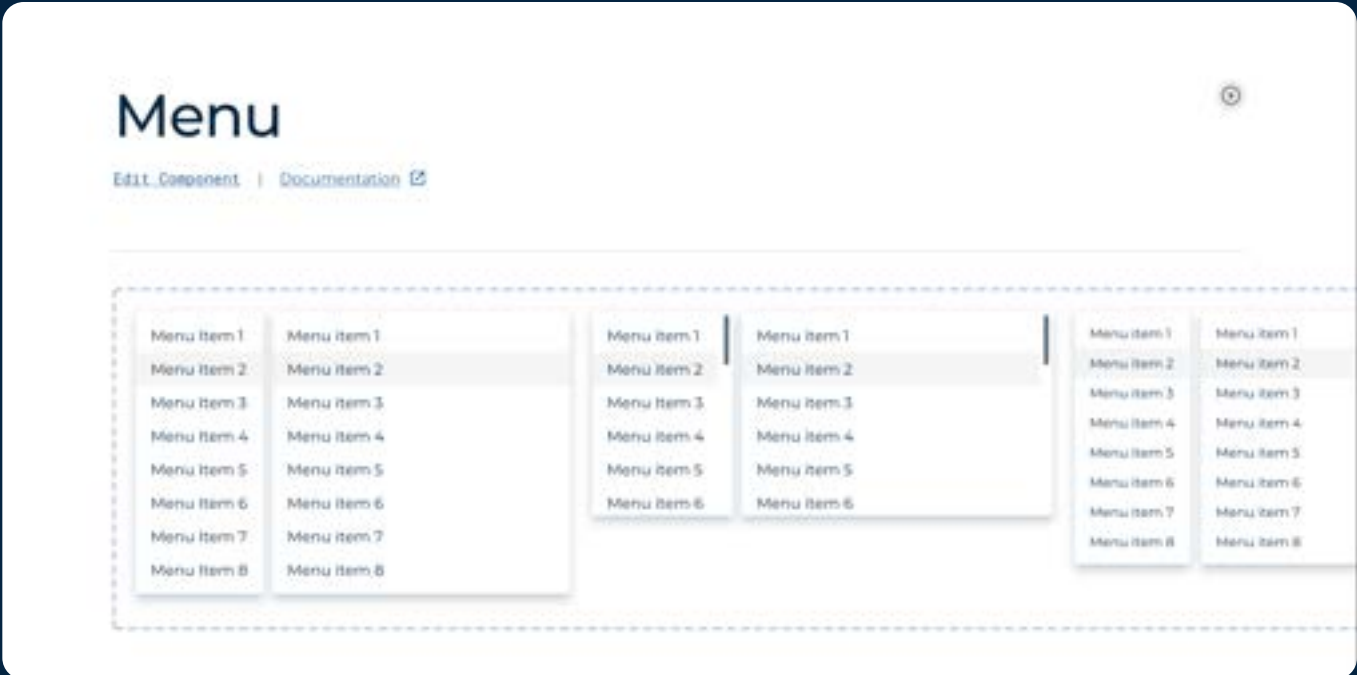

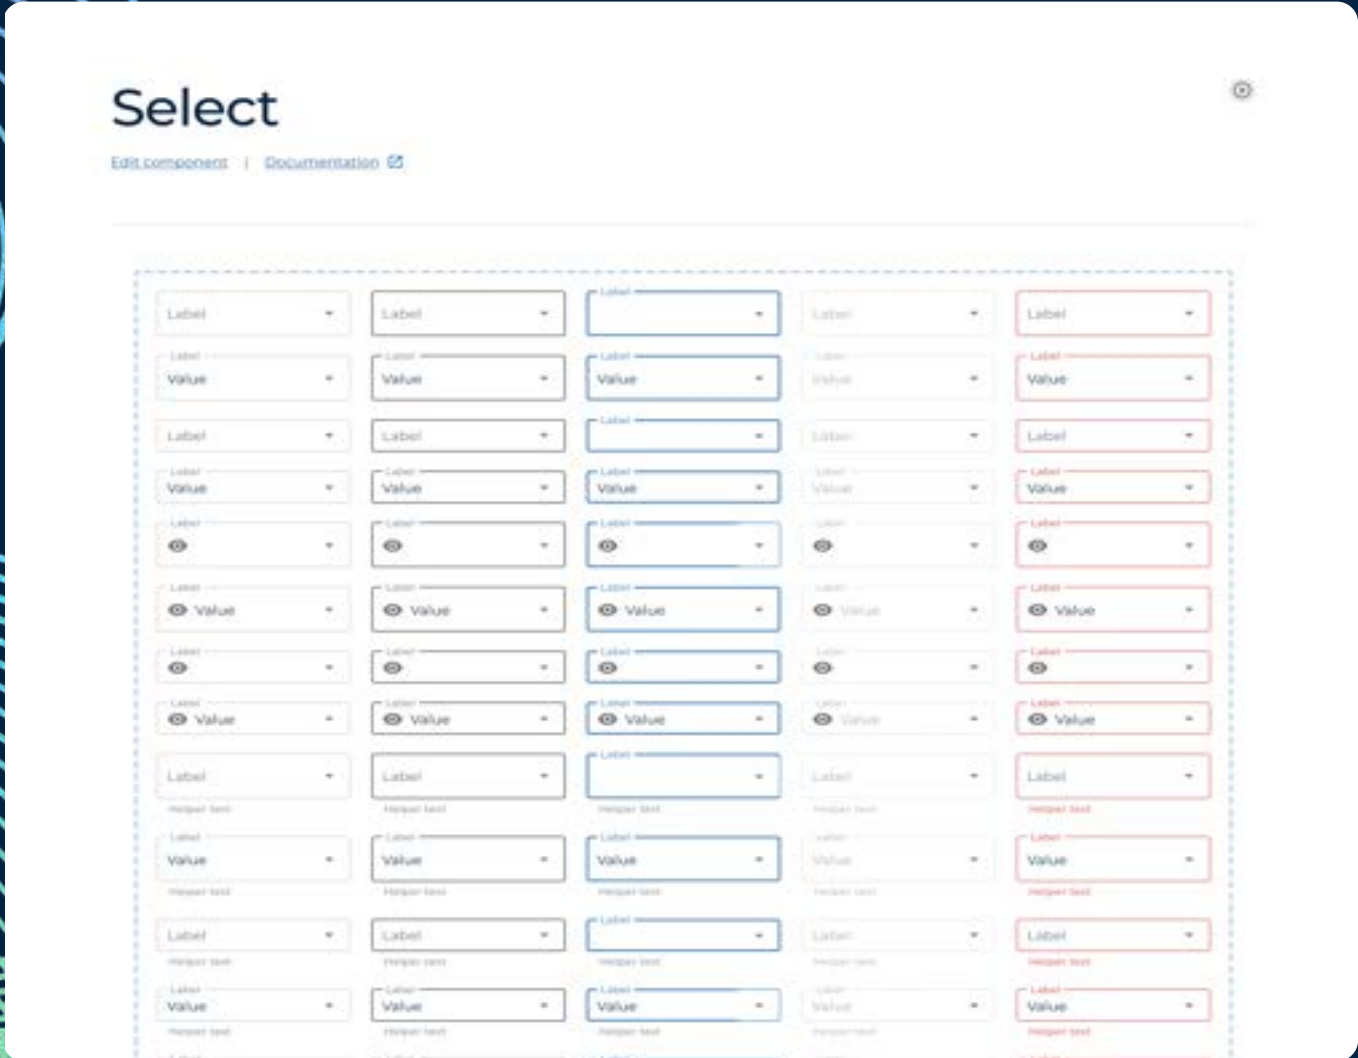

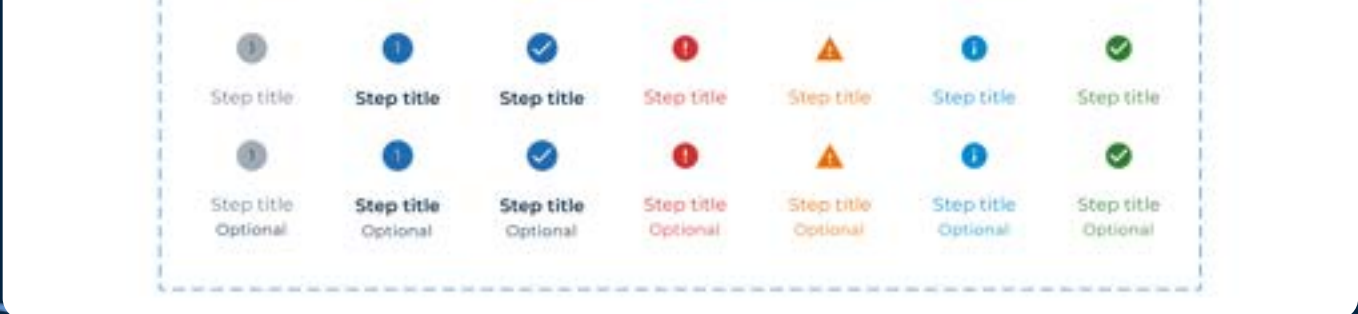

Branding and identity

Accessibility Mode

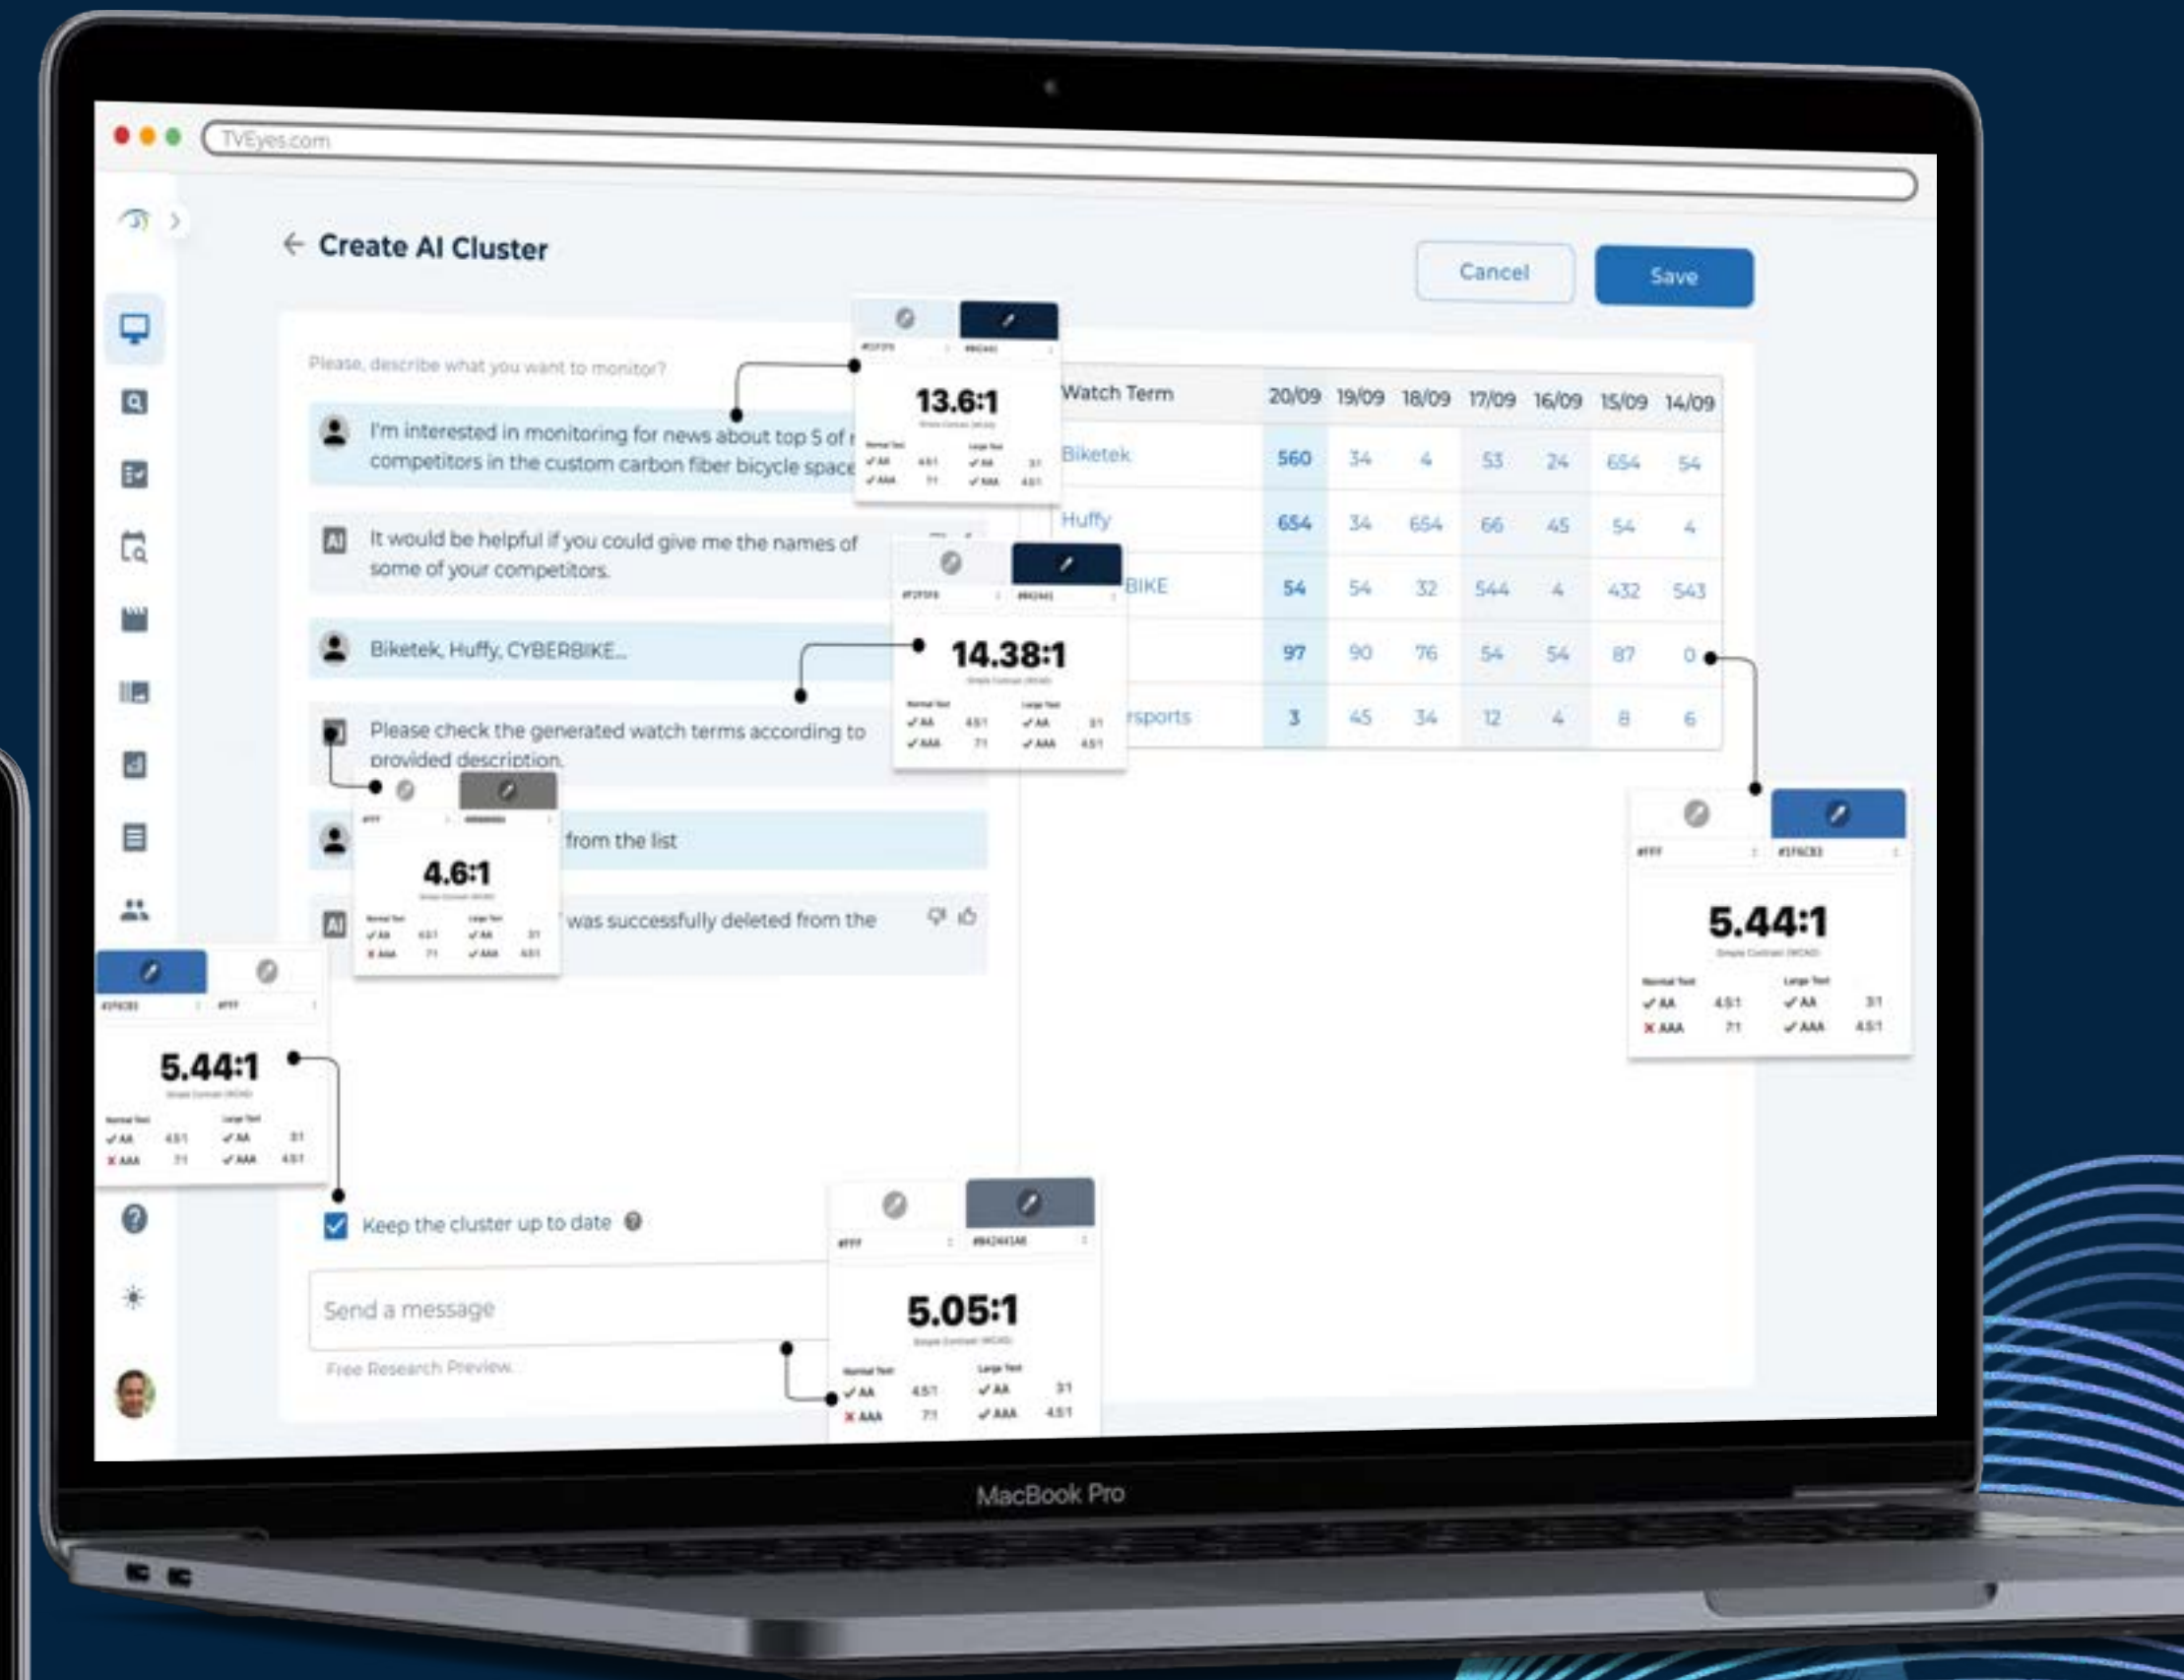

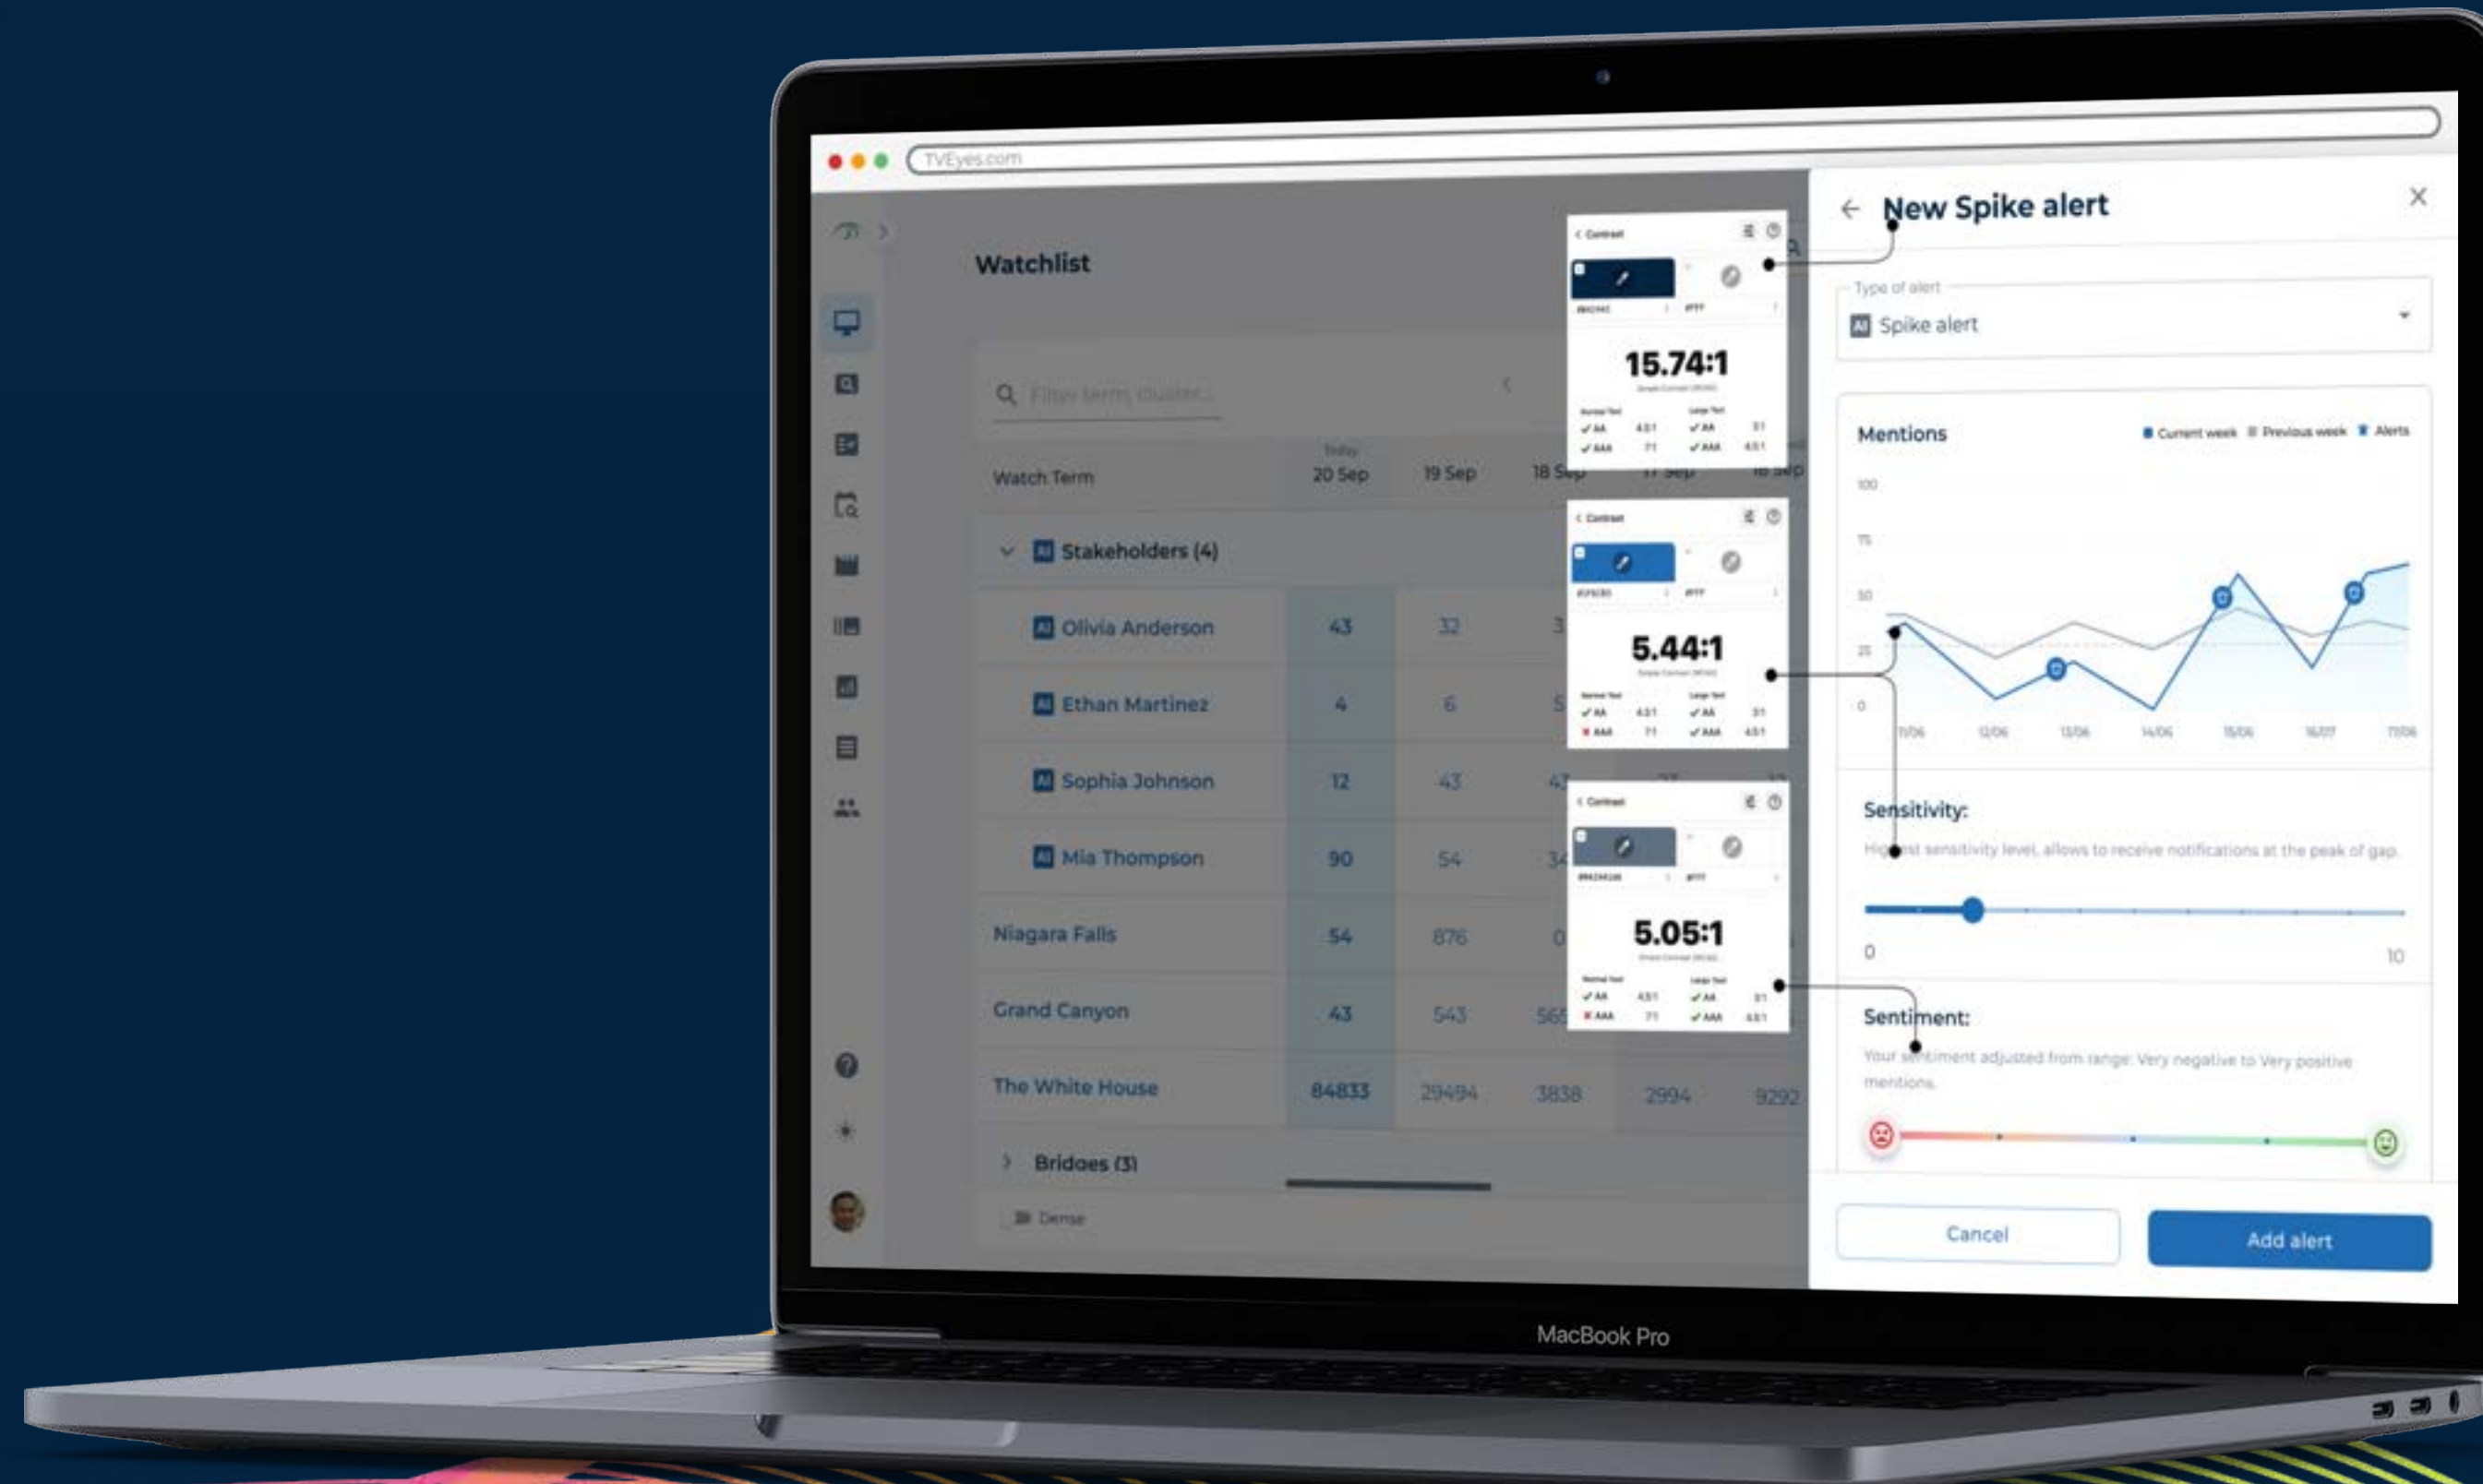

Introducing Accessibility Mode, a key feature designed for inclusivity and user-friendly interaction, ensures a seamless experience for users with varying abilities.

Contrast Test

TWOSION

Implementation of the W3C accessibility standard and contrast minimum level AA ensures that all users can seamlessly interact with the product and improves the overall user experience.

Heatmaps Evaluation

We meticulously validated every design element using Heatmap Analysis to gain unparalleled clarity into user interactions.

Data-Driven Iterations

Enhanced Usability

Streamlined Navigation

Smart Alerts

Experience the power of smart alerts – from detecting spikes and gaps in coverage to gauging shifts in sentiment, our smart alerts keep users ahead of critical developments.

Create a watchterm for New York City public transportation

AI Here's what I came up with: ("New York City Transit" OR "New York City Subway" OR "New York City Bus" OR MTA OR "Metro North Railroad") AND (MarketName:"New York City")

Metro North doesn't belong there.

AI Sorry, here's that term without Metro North ("New York City Transit" OR "New York City Subway" OR "New York City Bus") AND (MarketName:"New York City")

☒ Keep the watch term up to date ?

Dark Mode

An important consideration in a modern design system, as they can improve user experience and accessibility for users who prefer a darker interface or need to use an interface in low-light conditions.

Fully Responsive

Created multiple design layouts for different screen sizes and resolutions. Optimized the layout, typography, images, and other elements to fit the available space.
